

The Alkymi Platform

Build Your Data Action Layer

Real-world data is unstructured and it's what businesses run on. Unfortunately, this valuable data is often locked in PDFs, emails, scans, and other files used to drive mission-critical business processes.

For many organizations, this manual data extraction and burdensome data cleanup stand in the way of quick data actions—whether that's creating a new customer record in Salesforce, making an onboarding decision, or responding to time-sensitive investor requests.

With Alkymi, business users can build a data action layer to fuel accelerated business outcomes by enabling instant analysis and actions.

How it works

Alkymi supercharges data workflows by enabling no-code, intelligent data processing with a single, easy-to-use tool.

Data Inbox

A single tool to streamline document workflows, transform unstructured data tasks, and turn data into actions in thousands of enterprise applications.

- Optimize work and drive real-time business actions by zeroing in on critical data.
- Build end-to-end workflows by leveraging integrations with thousands of enterprise applications including Salesforce, Outlook, and more.
- Action any email, scan, document, or enterprise file type in a single tool.

Patterns Studio

Empower business users to automatically capture, transform, and action document data with no-code automation.

- Create powerful and flexible automation to handle mission-critical business processes in which data onboarding is key.
- Leverage 500 Patterns Blueprints that are based on popular document types.
- Create custom automations and workflows for virtually any unstructured data use case.

Patterns

Capture targeted data to make workflows actually flow, and tackle your most unstructured difficult data challenges.

- Define mission-critical data and let Patterns capture, transform, and validate it with customized workflow automation.
- Tailor-made, AI-powered Patterns will seek out the exact needed data points no matter where they are.
- Access real-time insights in Data Inbox and kick off downstream workflows with a single click.

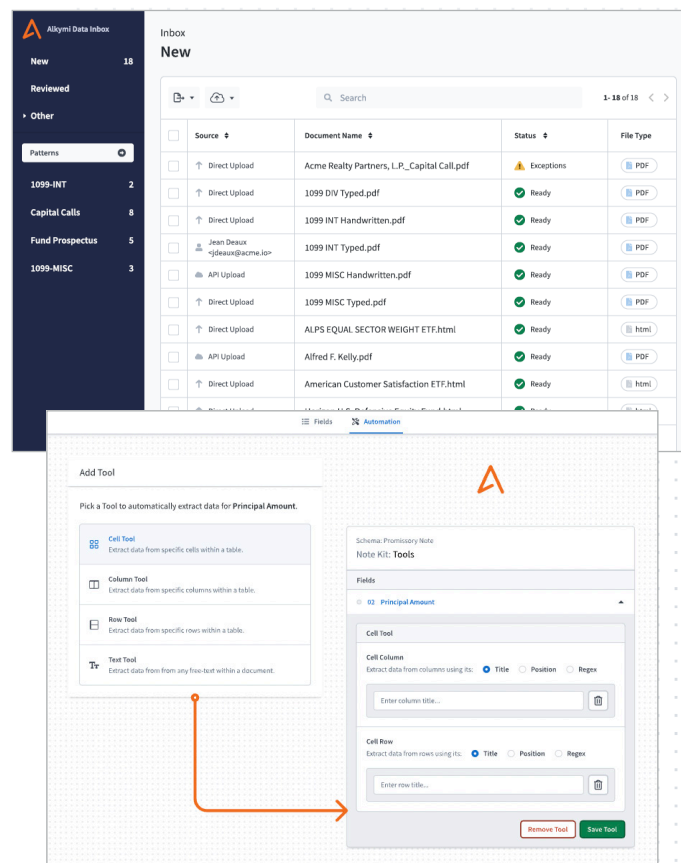

Data action layer for operational agility

Alkymi gives business users the power to create a data action layer, take control of unstructured data workflows with no-code automation, and experience immediate ROI with integrations to thousands of email systems, business applications, databases, and more.

With 98% fewer manual steps in the data review and capture process, plus an audit trail to each data source, teams can confidently take immediate action to reduce costs, delight customers, and supercharge operations.

Highlights

- User-friendly, intuitive UI
- Build custom end-to-end workflows
- No-code unstructured data automation for business users
- Out-of-the-box integrations
- Easy-to-use API for import and export
- At least 98% faster than manual processes
- 100% auditability to source data
- 27 supported email and document formats
- SOC 2 Type 2 Certified; Enterprise-grade security

Build the data action layer while creating workflows that move **98% faster**.
